# ME 222: Kinematics of Machines and Mechanisms Practical 10: Velocity and Acceleration Analysis using MATLAB IIT-Jodhpur 

Date: 12 ${ }^{\text {th }}$ April 2019
Time: 1 pm to 4 pm

## Solve the following using MATLAB:

For the forubar mechanism analysed in Practical 8-9 (for problem in Fig. 1), perform the following analysis using MATLAB for the input joint angle varying with time as $\vartheta_{2}=\omega t, \omega_{2}=2 \pi \mathrm{rad} / \mathrm{s}$ and $t$ varying from 0 to 2 s :
a. Plot $\omega_{2}, \omega_{3}, \omega_{4} \mathrm{v} / \mathrm{s} \mathrm{t}$
b. Plot velocity of point $A, B$ and $C v / s \quad t$ (both $X$ and $Y$ components)
c. Plot $\alpha_{2}, \alpha_{3}, \alpha_{4} \mathrm{v} / \mathrm{s} \mathrm{t}$
d. Plot accelerations of point $A, B$ and $C \mathrm{v} / \mathrm{s} t$ (both $X$ and $Y$ components)
